

Research Capacity Development at APC

INITIAL
INPUTS:

GISWATCH workshop

In LAC Results

GISWATCHER

Survey Results

ARN Survey

Results

NLF meeting

Evaluation

Project Concept

NOTE

Integrated analysis
Current situation
APC Research Needs and principles

December WEBINAR and Online discussion
Integrated analysis presentation
First reflections about research in APC and its

Research at APC state of art

Needs and expectations

Research Practices, Knowledges and pasions among members

Select a **common topic** to develop practical cases for January workshop

January Research Capacity Development

- Research at APC: why, what, what for?
 - Basic concepts
 - Research Design
 - Qualitative.Quantitative-Mixed Methodology Approach
 - Research Techniques (Quali-Quanti)
 - ICT for Research
 - Communicating Research
 - Research for actions
 - Research and advocacy
 - Research vs Evaluation
- Everything will be applied in a case study based in the topic we have choose together in the first webinar**

Practical cases based in common topic

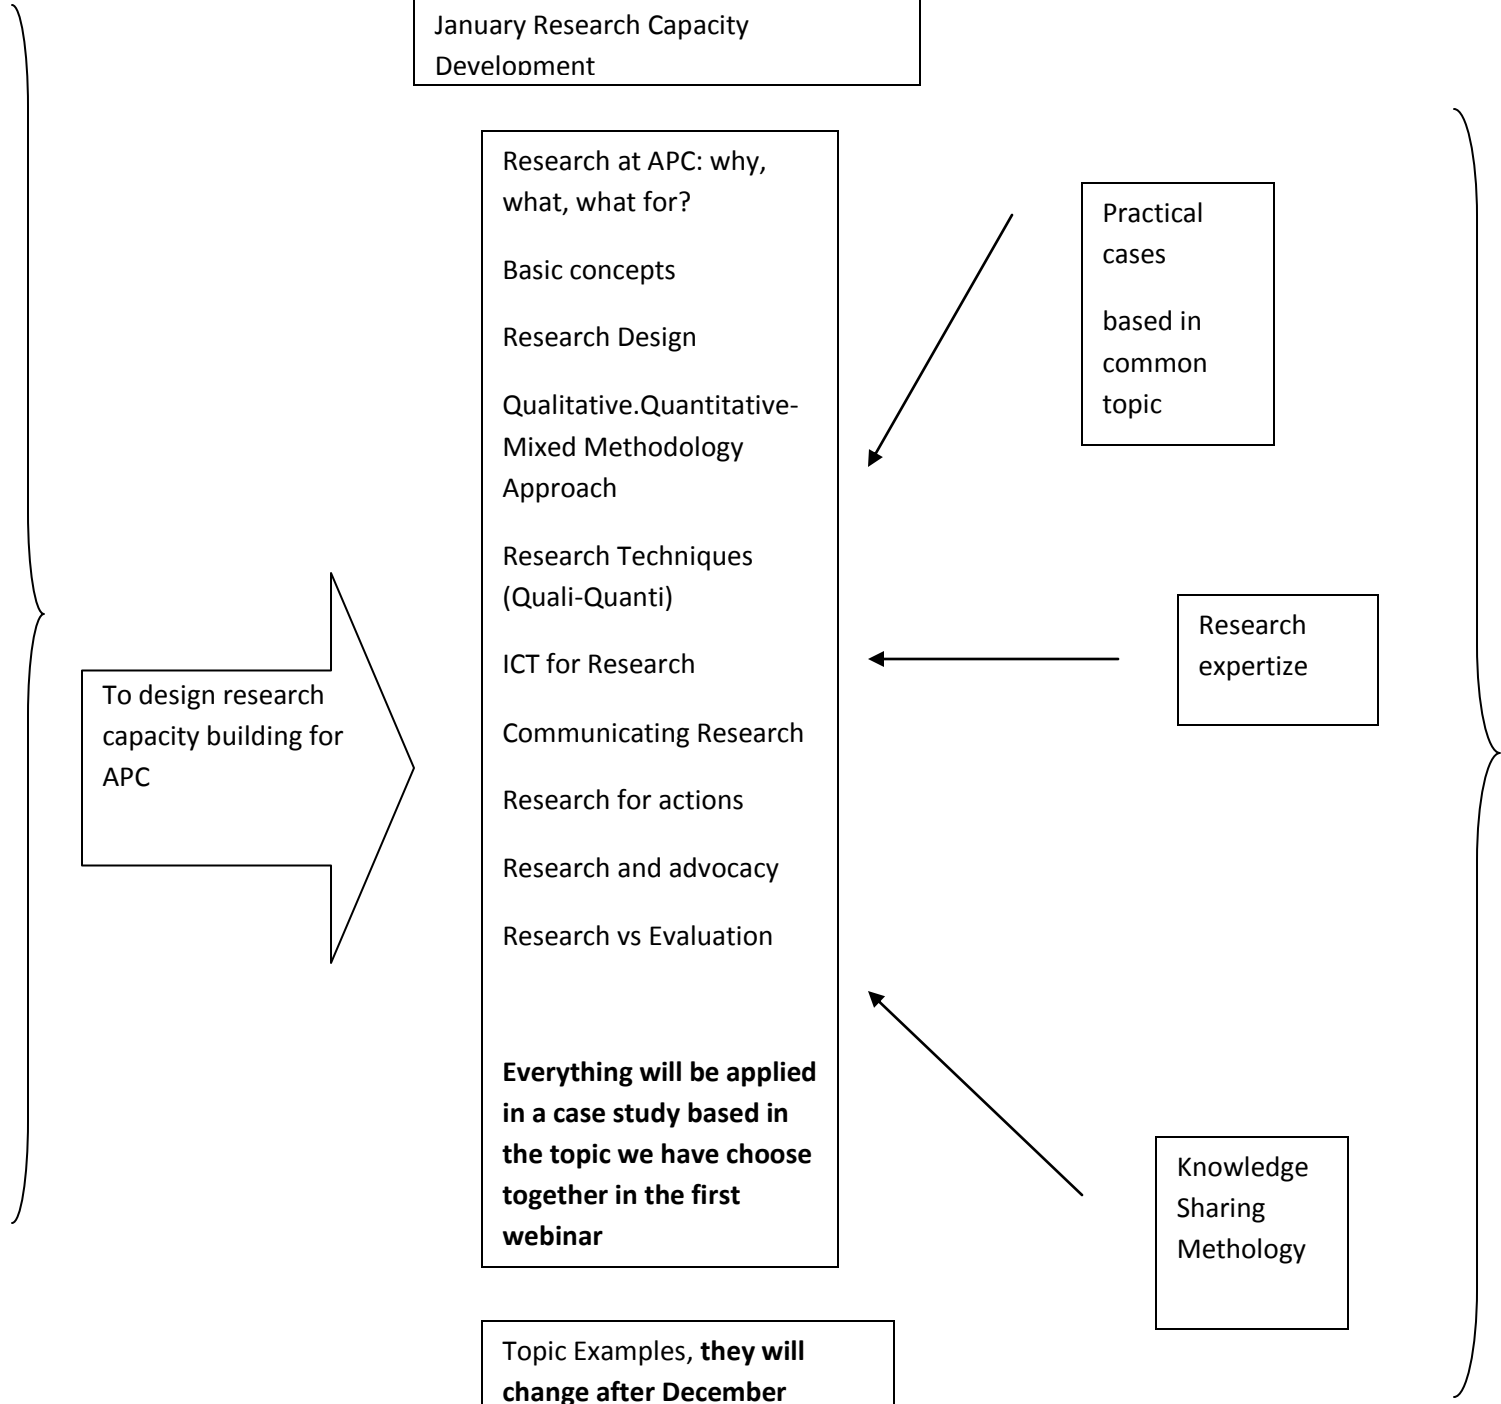

Research expertize

Knowledge Sharing Methology

Topic Examples, **they will change after December Webinar**

To design research capacity building for APC

Follow up Process for doubts and application

Notes:

Inputs: We will take the different inputs related with research, research needs, APC theory of change, member interest, etc collected by surveys, concept notes and evaluations. The purpose will be to develop a presentation with an integrated analysis and define the first ideas about what kind of research we need to develop at APC and for what.

December online activity: We will develop a Webinar where we present this first analysis as one of the element for a online discussion with the members of the workshop. We will also integrate in the online discussion the practices, experiences, knowledge and challenges about research of the participants.

Also all the participants will choose a common research topic to develop practical case studies for January workshop. The objective is to have a research workshop with practical application. Note that the common topic and case studies will be used as a learning resources they won't be necessarily for real application.

Online activity results: As online discussion results we will define the current situation on research at APC members and APC network, also the needs and expectations and knowledge and passions to be integrated in the design of the January Workshop.

With all these inputs, we will develop the methodology for January.

January Workshop: We propose to have 4 days workshop if it is possible. The content for the workshop will be defined after the online discussion, but as example some of the topics the ones presented in the diagram.

The workshop methodology will be based in knowledge sharing and collective building approach. It will be conceptual and practical. To apply the concepts we will follow practical cases based in the common topic choose at online discussion. Also we will integrate expert knowledge by people with a lot of experience in research.

Follow up: we will have a follow up mechanism (to be defined at the workshop) to continue clarifying doubts and supporting applications of the learning.
